

PLASTIC CAP AND CHAIN

MODEL LVPCNC

DESCRIPTION:

The Lansdale Plastic Cap with Chain, Model LVPCNC are intended to protect the hose valve threads from any type of vandalism or other damage. Since plastic is inexpensive and has no scrap value, these are used in lieu of brass or bronze caps that are very often stolen for their scrap value. These caps feature a lug design for ease of installation/removal and are supplied with a chain that attaches to the valve to prevent loss.

- Cap: Injection molded ABS
- Gasket: Black NBR
- Chain & Screw: Steel with brass finish
- Color: Red
- Sizes: 1 -1/2 FNST; 2 1/2FNST; 3FNST

INSTALLATION:

When installing the cap make sure the threads are free of any debris, and thread the cap onto the valve until tight (do not over tighten); attach the chain to the body of the valve where indicated by the valve manufacturer. **DO NOT USE ANY TYPE OF THREAD SEALANT OR THREAD TAPE WHEN INSTALLING THE CAP.**

CAUTION: Hose valve caps both brass or plastic are not designed or rated to be put under pressure, therefore do not pressurize as serious bodily injury can occur.
